Nesting Rules

3

With Sass, you can nest CSS rules inside each other instead of repeating selectors in separate declarations.

The nesting also reflects the markup structure.

<div class="welcome">
  <div class="content">
    <h3>Welcome to</h3>
    <h1>WP Galaxy</h1>
    <p class="name"><span></span> Abuzar</p>

</div>
```

```
.welcome
  width: 100%
  height: 100vh
  display: flex
  align-items: center
  justify-content: center
  .content

      color: #b6b6b6
      font-size: 2.5em
      margin-bottom: -1rem
    h1
      color: #2b2b2b
      font-size: 9.7em

  .name
    color: #b6b6b6
    text-align: right
    font-size: 1.1em

      height: 2px
      background: #b6b6b6
      margin-bottom: 4px

REFERENCING PARENT SELECTORS WITH &

Along with nesting rules and properties, Sass adds the ability to reference the current parent selector using the ampersand as a special placeholder.

```
.about-me
```

```
