Variables

4

We repeat ourselves so often in a stylesheet.
Colors, fonts, background images, widths,
etc.

Variables in Sass are defined using the \$ symbol then name of variable like so:

```
$primary-color: #2b2b2b  
$secondary-color: #b6b6b6  
$light-color: #ffffff
```

Variables can be used
in css properties like:

```
.content
  h3
    color: $secondary-color
    font-size: 2.5em
    margin-bottom: -1rem
  h1
    color: $primary-color
    font-size: 9.7em

.name
  color: $secondary-color
  text-align: right
  font-size: 1.1em
  span
    display: inline-block
    width: 1.5rem
    height: 2px
    background: $secondary-color
    margin-bottom: 4px
```
